Student Module
The student module contains student-based data. Each student is assigned a unique Student ID to track their school performance within a year and across years. The module captures student enrolment information into a school, including the class level, school fees, and qualification data. It reports on enrolment count per course, school, and by gender and district if required.

Finance Module
This module generates and captures student fees based on the registered qualification.

Large Scale Assessment Module
The Large-Scale Assessment Module captures student registration, sampling, and booklet distribution. This module also retrieves and assigns items to booklets, captures assessment data using a mobile app and generates assessment-based reports. Information on teachers, Leader registration and booklet distribution can also be found in this module.

Assessment Module
The assessment module is based on Outcomes Based Curriculum, Assessment and Reporting. It captures curricular learning outcomes and skill levels as contained in subject syllabi, students internal and external assessment results and carries out exam processing within a few minutes. It allows users to generate student-based result notices. It reports on item analysis based on student results per course for school and country. Thus, providing data for better decision making.

Strategy for Monitoring and Improving Teacher Effectiveness Module
This module tracks and captures information on teacher competency standards, generate reports on teacher competencies and provides evidence for teacher development.

Strategy for Monitoring and Improving Leadership Effectiveness
This module tracks and captures information on leader competency standards, generate reports on leader competencies and provides evidence for leader development.

Staff Module
This module contains all the details about staff administration.
